# Series 3

*Touch Expert*

## The new Ancar Series 3,

electronic treatment centre, represents the culmination of our extensive experience in the dentistry world.

A flawless design and the planned and an audited construction are meant to last, thereby it is the proven and current touch technology innovation.

Our interpretation of how machine-user interaction should be. A new experience that makes your work more intuitive, precise, safe, dynamic and profitable.

'Touching technology' is Ancar's promise to offer professionals more benefits, maximum precision and informative details with a perfection of quality.

# Series 5

*Touch Expert*

## Welcome to the New Series:

treatment units with suspended chair and vertical elevation. Open space under the chair, without obstacles, allowing total freedom of leg movement for dentist and their assistants.

The ergonomic design means all components are integrated and coordinated together, so that any dental work can be done as well, comfortably and efficiently as possible.

The perception of looking at such a technologically advanced, customizable and different treatment unit that is almost unique, is transferred into the design and look of the consulting room. And, of course, made of aluminium.

New Series 5: undoubtedly the best choice!

## Sd-550 *Touch Expert*

in design,  
in expectations.

FOR LEFT AND RIGHT - HANDED USERS

*Scandinavian*

## Innovation is also ambidextrous:

An electro-pneumatic unit designed for both right and left handed use to assist the dentist fully during their professional practice.

Along with the sturdiness, ergonomics and reliability of its equipment, Ancar now has an independent water unit that can be installed on the left side (standard) or right side (optional) of the chair.

This solution provides a bi-functional unit for the professional and the dental chair that best adapts to the features and availability of the space.

Right-handed working position.

Left handed working position.
